Select Focal Mononeuropathies of the upper or lower extremity

Myopathies

Lower Motor Neuron Diseases

PAIN CLINIC:

We provide comprehensive pain clinic services and have Board Certified Pain Medicine Specialists. See our separate link on our home page for all pain clinic services.

Pain Clinic

The Rehab Doctors provide comprehensive state of the art pain clinic services at Black Hills Surgery Center, Rapid City Regional Hospital and Spearfish Surgery Center.

In Pain Clinic our physicians use selective injections to try and diagnose the source of your pain and then work to decrease or eliminate your pain. We use laser guided X-ray techniques to help us localize the source of your pain and provide optimal precision treatment.

We are one of the few centers in the country that offer Ultrasound guided injections. Dr. Wisniewski trained under one of the pioneers of this technique at Mayo Clinic and has brought his expertise in this area to our pain clinic.

We offer the following procedures in our clinic:

Fluoroscopically guided procedures with Laser Guidance (use picture of Dietrich with fluor machine)

Epidural Steroid injections for treatment of back pain or radicular pain from a herniated or injured disc in your back

Facet injections--used to treat pain from injured or arthritic joints in your back or neck
Sacro-Iliac joint injections

Intraarticular hip, shoulder, hand, knee, ankle and wrist injections

Sympathetic ganglion blocks for treating CRPS or RSD (complex regional pain syndrome)

Diagnostic Medial Branch Blocks for evaluating back and neck pain

Radio Frequency lesioning for treatment of neck and back facet joint pain

Provactive Lumbar Discography for diagnosing the source of low back pain

Occipital Nerve Blocks for treating upper neck pain and Headaches

Piriformis muscle injections for treating buttock and leg pain from piriformis muscle spasm

Trigger Point Injections for treating persistent muscle spasm

Bursa injections for bursitis in the hip, shoulder or knee.

IntraDiscal Electrothermal Therapy (IDET) for the treatment of pain originating from injured intervertebral discs in the low back

Bo-tox injections for treating muscle spasm and pain

Ultrasound guided Injections (use picture of W with US machine)

Intraarticular injections into the small joints of the hands and feet, wrist, ankle, hip, knee, elbow, and shoulder.

Tendon sheath injections for treating painful tendonitis including Achilles tendonitis, DeQervain's tenosynovitis, bicep tendonitis and Plantar fasciitis

Joint aspiration to diagnose gout or other types of arthritis

Selective muscle injections for treating Myofacial pain.
